## RADIOACTIVE MINERAL WATERS REPORTED IN ZAFORZHE

### Over 20 Sources Found

More than 20 sources of mineral water are located in the hills some 9 kilometers from Ubinskaya Station, Severskiy Rayon, Krasnodar Kray. The springs have been named "Zaporozhskikh" and have sulfur, iron, radioactive, and other waters.

In 1945, a commission of specialists visited the springs and drew up plans for a health resort. To date the resort remains an on-paper development. -- A. Lentskiy, Middle School Instructor, Novo-Dmitriyevskaya, Krasnoyar Kray

### "Narzane" Shortage

A report from Lessentuki tells of the arrival of a group of scientists in search for new sources of narzans /a carbonic acid mineral water which derives its name from the name of its source in Kislovodsk/. So far three deep test wells have been drilled. One of them has developed into a good source of this mineral water. Studies are being conducted to determine the chemical composition of the water and to establish the advisability of further drilling.
